

Practical 5: Perform statistical operations using Pandas

```
import pandas as pd
```

```
data = {  
    'Marks': [75, 88, 92, 66, 80, 77, 90]  
}  
df = pd.DataFrame(data)
```

```
print("Mean:", df['Marks'].mean())  
print("Max:", df['Marks'].max())  
print("Min:", df['Marks'].min())  
print("Standard Deviation:", df['Marks'].std())
```
